Professional Summary

Building production-grade SaaS platforms with strong product thinking and engineering discipline.

Creating AI-enabled workflows, automation systems, and data-driven experiences for real users.

Delivering reliable backend services, polished interfaces, and scalable cloud-native systems.

Bridging product, design, and engineering to turn complex requirements into dependable software.

Featured Projects

Selected products built end to end

DECISION INTELLIGENCE PLATFORM

DeciCore AI

2026

Full-Stack Engineer

Decision Intelligence Platform

Enterprise decision intelligence platform that converts raw business data into operational insights through AI-assisted analysis, risk detection, and decision support workflows.

React

Next.js

Tailwind CSS

Node.js

Express

Git

Key Features

- Built a multi-step data ingestion and processing experience
- Implemented analytics dashboards for risk and opportunity visibility
- Delivered secure user management and responsive product interfaces

Business Value

- Improved decision support for operational teams
- Reduced manual analysis effort through structured workflows
- Made complex data accessible through a polished product experience

Portfolio

SmartOrder

2026

Full-Stack Engineer

SaaS Platform

Full SaaS platform for restaurant operations, customer ordering, and business automation with centralized administration and real-time monitoring.

React

Next.js

Tailwind CSS

Node.js

Express

Real-time Data Sync

Key Features

Built a multi-tenant admin and restaurant management workflow

Implemented subscription controls, payments, and platform settings

Delivered a customer-facing experience with live operational visibility

Business Value

Supported scalable restaurant operations through a centralized platform

Improved service automation for business owners and staff

Enabled live monitoring of activity, revenue, and system health

Portfolio

LeadMorph

2026

Full-Stack Engineer

Data Processing Platform

Cloud-based data processing platform that automates data cleaning, transformation, validation, and workflow execution for large-scale business datasets.

Python

FastAPI

Pydantic

Next.js

React

Tailwind CSS

Key Features

Implemented robust backend APIs for large file ingestion and processing

Built interactive data validation and cleaning workflows

Created a responsive UI for monitoring uploads and processing status

Business Value

Reduced manual effort in data preparation and cleanup

Improved reliability of downstream data workflows

Made large dataset processing more structured and repeatable

Portfolio

CleanEx

2026

Full-Stack Engineer

Booking & Operations Platform

Modern booking and operations platform for cleaning service companies, covering reservations, scheduling, customer management, and service delivery workflows.

React

Next.js

TypeScript

CSS3

Git

GitHub

Key Features

Built a multi-step booking flow for service requests

Implemented responsive booking and customer management screens

Structured the product for future admin, pricing, and operations expansion

Business Value

Improved the end-to-end customer booking experience

Reduced friction in service scheduling and request handling

Created a scalable foundation for operations-driven product growth

Full-Stack Developer

Late 2024 – Present

Independent / Personal Projects

- Designed and developed DeciCore, a SaaS platform for business intelligence and operational decision support.
- Built SmartOrder, a SaaS platform for restaurant management, online ordering, and workflow automation.
- Developed LeadMorph, an AI-powered data processing and workflow automation platform using FastAPI and PostgreSQL.
- Built CleanEx, a service management and booking platform with responsive React and Next.js interfaces.
- Developed ResumeForge, an AI-assisted resume builder with automated HTML and PDF generation.
- Implemented REST APIs, authentication, responsive UI, database integration, and AI features across multiple personal SaaS projects.
