Professional Summary

Reliable entry-level production candidate focused on process, consistency, and quality-conscious work.

Comfortable following repeatable routines, checking outputs, and supporting smooth operational flow.

Able to learn procedures quickly and contribute to organized team execution.

Bringing strong digital organization habits and practical workflow thinking into production support.

Featured Projects

Selected products built end to end

SERVICE OPERATIONS WORKFLOW

CleanEx Operations Flow

2026

Operations Support

Service Operations Workflow

Structured a service booking and operations workflow around request intake, scheduling, customer handling, and delivery tracking.

Workflow mapping

Scheduling logic

Service records

Quality review

Key Features

- Mapped a multi-step flow for service requests
- Organized customer, schedule, and service information
- Prepared the workflow for future admin and operations expansion

Business Value

- Improved understanding of operational handoffs
- Created a clearer process for request handling
- Supported reliable service delivery through structured records

SmartOrder Process Coordination

2026

Workflow Organizer

Restaurant Operations System

Designed operational thinking for restaurant ordering, customer requests, admin control, and live service monitoring.

Order flow

Status tracking

Admin records

Monitoring

Key Features

Organized order and service states into clear process stages

Supported admin visibility into activity and workflow status

Structured customer-facing and operations-facing information

Business Value

Improved service flow clarity

Reduced confusion between customer request stages

Strengthened awareness of real-time operations

Portfolio

QUALITY & TASK TRACKING

Production Readiness Tracker

2026

Process Support

Quality & Task Tracking

Created a structured approach for tracking tasks, checking completion, reviewing quality, and preparing reliable handoffs.

Task records

Quality checks

Documentation

Progress tracking

Key Features

Grouped tasks by stage, status, and completion

Prepared repeatable checklists for quality review

Documented outputs for cleaner handoff

Business Value

Improved consistency in task completion

Made operational status easier to review

Supported disciplined and reliable workflows

Professional Experience

Production & Operations Support Candidate

Late 2024 - Present

Independent / Personal Projects

- Built structured workflows for booking, service handling, and operational management projects.
- Practiced organizing work into clear stages with defined inputs, outputs, checks, and handoffs.
- Worked with process-driven product ideas involving scheduling, customer requests, delivery flow, and status tracking.
- Developed a reliability-focused approach to documentation, repeatable routines, and final review.
- Used digital tools to track tasks, structure information, and prepare consistent operational records.
- Built readiness for production environments through process thinking, quality awareness, and disciplined execution.
