

Interactive Career Nexus

Ahmed FS Dev

Choose a professional world. Each panel links to its focused resume section.

01

Software Engineering

Build systems, products, automation, and intelligent workflows.

02

Data Entry & Data Processing

Transform scattered records into clean, reliable structure.

03

Production

Support operational flow with consistency, quality, and focus.

Software Engineering

Ahmed FS Dev | Full-Stack Developer

I design and ship full-stack product experiences that combine reliability, clean architecture, and measurable business impact.

Professional Summary

- Building production-grade SaaS platforms with strong product thinking and engineering discipline.
- Creating AI-enabled workflows, automation systems, and data-driven experiences for real users.
- Delivering reliable backend services, polished interfaces, and scalable cloud-native systems.
- Bridging product, design, and engineering to turn complex requirements into dependable software.

Core Capabilities

Frontend

HTML5, CSS3, Jinja2, Responsive UI, Design systems

Backend

Python, Django, FastAPI, Flask, REST APIs

AI

Prompt design, Automation, Workflow orchestration, Intelligent product features

Databases & Cloud

PostgreSQL, Docker, AWS, SQL, Scalable services

DevOps & Tools

CI/CD, Testing, WeasyPrint, Git, Observability

Experience

Full-Stack Developer

Independent / Personal Projects | Late 2024 – Present

- Designed and developed DeciCore, a SaaS platform for business intelligence and operational decision support.
- Built SmartOrder, a SaaS platform for restaurant management, online ordering, and workflow automation.
- Developed LeadMorph, an AI-powered data processing and workflow automation platform using FastAPI and PostgreSQL.
- Built CleanEx, a service management and booking platform with responsive React and Next.js interfaces.
- Developed ResumeForge, an AI-assisted resume builder with automated HTML and PDF generation.
- Implemented REST APIs, authentication, responsive UI, database integration, and AI features across multiple personal SaaS projects.

Selected Projects

DeciCore AI

Enterprise decision intelligence platform that converts raw business data into operational insights through AI-assisted analysis, risk detection, and decision support workflows.

Stack: React, Next.js, Tailwind CSS, Node.js, Express, Git

SmartOrder

Full SaaS platform for restaurant operations, customer ordering, and business automation with centralized administration and real-time monitoring.

Stack: React, Next.js, Tailwind CSS, Node.js, Express, Real-time Data Sync

LeadMorph

Cloud-based data processing platform that automates data cleaning, transformation, validation, and workflow execution for large-scale business datasets.

Stack: Python, FastAPI, Pydantic, Next.js, React, Tailwind CSS

CleanEx

Modern booking and operations platform for cleaning service companies, covering reservations, scheduling, customer management, and service delivery workflows.

Stack: React, Next.js, TypeScript, CSS3, Git, GitHub

Data Entry & Data Processing

Ahmed FS Dev | Data Entry & Data Processing Specialist

I organize, clean, validate, and prepare business data with strong attention to accuracy, structure, and reliable delivery.

Professional Summary

- Transforming scattered records, spreadsheets, links, and forms into clean structured information.
- Supporting data-heavy workflows through careful entry, formatting, validation, and review.
- Using technical awareness to improve accuracy, consistency, and repeatability in data processing tasks.
- Delivering organized outputs that teams can trust for reporting, operations, and decision-making.

Core Capabilities

Data Entry Accurate typing, Record creation, Form entry, Copy editing, Field formatting	Processing Data cleaning, Validation checks, Duplicate review, Normalization, Quality control
Spreadsheets Excel workflows, Google Sheets, Sorting, Filtering, CSV handling	Digital Tools PDF extraction, Online research, Documentation, Database basics, File organization
Professional Habits Attention to detail, Confidentiality, Consistency, Time management, Clear communication	

Experience

Data Entry & Data Processing Specialist

Independent / Personal Projects | Late 2024 - Present

- Organized structured project, contact, portfolio, and operational records across multiple digital products.
- Cleaned and validated links, metadata, feature lists, technology stacks, and resume content for public-facing use.
- Prepared consistent JSON datasets for automated HTML and PDF generation workflows.
- Reviewed generated web and document outputs to catch formatting, spelling, encoding, and data consistency issues.
- Applied spreadsheet-style thinking to sort, group, normalize, and present information clearly.
- Maintained accurate reusable records for profiles, projects, skills, contact details, and portfolio references.

Selected Projects

ResumeForge Data Pipeline

Structured profile and resume data into reusable records for automated website and PDF generation.

Stack: JSON, Spreadsheets, Data validation, HTML output, PDF review

Portfolio Records Cleanup

Collected, cleaned, and organized portfolio references, project summaries, technology stacks, and external links.

Stack: Data entry, Link checking, Categorization, Quality review

Operational Data Formatting

Prepared structured service, booking, and workflow information for product and operations-oriented projects.

Stack: CSV concepts, Tables, Sorting, Validation, Documentation

Production

Ahmed FS Dev | Production / Manufacturing Assistant

I support production environments with discipline, reliability, quality awareness, and a strong ability to follow structured workflows.

Professional Summary

- Reliable entry-level production candidate focused on process, consistency, and quality-conscious work.
- Comfortable following repeatable routines, checking outputs, and supporting smooth operational flow.
- Able to learn procedures quickly and contribute to organized team execution.
- Bringing strong digital organization habits and practical workflow thinking into production support.

Core Capabilities

Production Support Process following, Task discipline, Workstation readiness, Shift reliability, Output tracking	Quality Visual checks, Consistency review, Issue reporting, Clean handoff, Safety awareness
Operations Workflow stages, Scheduling awareness, Team coordination, Documentation, Time management	Digital Awareness Basic data tracking, Online tools, Report preparation, File organization, Process records
Professional Habits Reliability, Learning speed, Communication, Focus, Responsibility	

Experience

Production & Operations Support Candidate

Independent / Personal Projects | Late 2024 - Present

- Built structured workflows for booking, service handling, and operational management projects.
- Practiced organizing work into clear stages with defined inputs, outputs, checks, and handoffs.
- Worked with process-driven product ideas involving scheduling, customer requests, delivery flow, and status tracking.
- Developed a reliability-focused approach to documentation, repeatable routines, and final review.
- Used digital tools to track tasks, structure information, and prepare consistent operational records.
- Built readiness for production environments through process thinking, quality awareness, and disciplined execution.

Selected Projects

CleanEx Operations Flow

Structured a service booking and operations workflow around request intake, scheduling, customer handling, and delivery tracking.

Stack: Workflow mapping, Scheduling logic, Service records, Quality review

SmartOrder Process Coordination

Designed operational thinking for restaurant ordering, customer requests, admin control, and live service monitoring.

Stack: Order flow, Status tracking, Admin records, Monitoring

Production Readiness Tracker

Created a structured approach for tracking tasks, checking completion, reviewing quality, and preparing reliable handoffs.

Stack: Task records, Quality checks, Documentation, Progress tracking
